PROFESSIONAL SUMMARY

Backend Developer with production experience designing and deploying server-side systems, REST APIs, and cloud infrastructure. Skilled in Node.js, Express.js, JWT authentication, MongoDB and PostgreSQL schema design, and deployment with Docker, AWS EC2, Nginx, and GitHub Actions. Built a live e-commerce backend with 10+ product categories and 3+ payment methods, fixed production issues on a live client platform, and works as a MERN Stack Developer and AI Engineering Mentor at HACA.

TECHNICAL SKILLS

Backend: Node.js, Express.js, REST API Design, Middleware Architecture, JWT Authentication, Role-Based Access Control, WebSockets

Database: MongoDB (Aggregation Pipelines, Schema Design, Indexing), Mongoose ODM, MongoDB Atlas Vector Search, PostgreSQL, Prisma ORM

Microservices & Distributed Systems: Microservices Architecture, API Gateway, RabbitMQ, Event-Driven Architecture, Inter-Service Communication, Synchronous & Asynchronous Communication, Service Discovery, Database-per-Service Pattern, Saga Pattern, Circuit Breaker Pattern, Fault Tolerance

System Design: High-Level Design (HLD), Low-Level Design (LLD), Scalability & Load Balancing, Caching Strategies, Database Sharding, Database Replication, CAP Theorem, Distributed Systems, Horizontal & Vertical Scaling, Design Patterns

DevOps & Cloud: Docker, AWS EC2, AWS S3, CloudFront (CDN), Nginx, GitHub Actions (CI/CD), Vercel, Turborepo, pnpm Workspaces

Security: JWT Access/Refresh Token Rotation, HttpOnly Cookies, Google OAuth, CORS, SSL/TLS via Certbot

AI / LLM: RAG Pipeline Design, Google Gemini API, Groq (Llama 3.3), Vector Search, MongoDB Atlas, Embedding Generation

Integrations: Razorpay, Cloudinary, Zod, Python (scripting & API simulation)

Frontend: React.js, Next.js, JavaScript (ES6+), Redux Toolkit, TanStack Query, Tailwind CSS

AI Tools: Claude Code, Cursor, Antigravity, ElevenLabs

Tools: Git, GitHub, Postman, VS Code, Linux

EXPERIENCE

MERN Stack Developer and AI Engineering Mentor

HACA, Calicut | Full-Time | Oct 2026 – Present

- Work in a combined developer and mentor role, handling development work alongside mentoring.
- Mentor learners across frontend and backend MERN stack curricula and AI engineering.

Freelance Web Developer

Orvyn Labs (Self-Founded) | Jan 2024 – Present

- Run a freelance development practice delivering end-to-end web solutions for real clients, managing requirements, UI/UX design, development, and deployment.
- Delivered and maintain live client projects Azura Resorts (azuraresorts.in) and BIG4 Tiles & Sanitary (big4.co.in).
- Reviewed AI-agent-generated code on BIG4, catching security, database, and deployment risks before production release.

PROJECTS

NEXTZEN | Full-Stack E-commerce Platform | nextzen.mubashiir.in

Tech: React.js, Node.js, MongoDB, AWS, Docker, Gemini API, Groq

- Designed and built the Node.js/Express.js backend for a production-grade e-commerce platform, architecting REST APIs across Admin and User systems for 10+ product categories with variant management, cart, and full order lifecycle.
- Engineered JWT authentication with access/refresh token rotation, HttpOnly cookie storage, Google OAuth, and role-based access control, securing 2 distinct user roles across all API routes.
- Designed a normalized MongoDB schema with aggregation pipelines for derived fields (totalStock, minPrice); resolved duplicate index issues, reducing query response time by ~40%.
- Built the payment backend integrating Razorpay with signature verification alongside COD, wallet, refund logic, coupon engine, and referral rewards across 3+ payment methods.
- Deployed backend via Docker on AWS EC2 with Nginx reverse proxy and Certbot SSL; configured AWS S3 and CloudFront CDN, cutting average media load time by over 60%.

- Configured GitHub Actions CI/CD to automate Docker image builds and deployment to EC2 on every push, reducing manual deployment effort to zero.
- Built a RAG product chatbot using the Gemini API and Groq (Llama 3.3), connected to the live MongoDB catalog via Express to fetch variant, size, and stock data so answers stay grounded in real product data.

BIG4 TILES & SANITARY | Full-Stack E-commerce Platform (Live Client) | big4.co.in
Tech: Next.js, Express.js, PostgreSQL, Prisma, WebSockets, Turborepo, Cloudinary

- Worked on a live Turborepo (pnpm) monorepo with Next.js storefront and admin apps and an Express and WebSocket server, using Prisma, Neon PostgreSQL, Cloudinary, and Zod.
- Found and fixed a silent lead-loss bug that was dropping all contact form submissions.
- Remediated an exposed production database credential, a conflicting ISR cache configuration, and Prisma transaction errors before launch.
- Diagnosed a multi-cause production deployment failure: missing Suspense boundary, Next.js 16.2.x prerendering regression, dependency mismatches, and stale build cache.

ASKMYCV | RAG-Based CV Evaluation Pipeline
Tech: RAG Pipeline, Evaluation Lab

- Built a RAG-based CV evaluation pipeline with an evaluation lab that scores results against ground-truth data.

QUICKMEDI | Medicine Availability Finder
Tech: React.js, Node.js, Python, MongoDB

- Built a Node.js middleware layer connecting a React frontend to a Python pharmacy data service via REST APIs.
- Developed a Python service simulating pharmacy management APIs, returning mock stock data across multiple medical shops.
- Designed clear service boundaries between Node.js middleware, Python data layer, and MongoDB storage.

AZURA RESORTS | Hospitality Website (Live Client) | azuraresorts.in
Tech: Next.js, Tailwind CSS, Framer Motion, Vercel

- Managed production deployment of a real-client website on Vercel, configuring custom domain DNS with Hostinger and HTTPS for a zero-downtime go-live.

CERTIFICATIONS

Foundations of Coding Full-Stack
Microsoft, Coursera | Apr 2026 | Credential ID: RYXAW17HITHH

EDUCATION

Bachelor of Computer Applications (BCA)
University of Calicut | Aug 2022 – May 2025 | CGPA: 6.83 (B+)

MERN Stack Development Program
Brototype, Calicut

- Production-focused training in REST API design, middleware architecture, authentication, Service/Repository pattern, Docker, and AWS deployment.
